

Maps, Warfare & News Coverage

International Spring School on Visualization 2023

From May 3rd to 5th, the Spring Summer organized by the Department of Geoinformatics at Palacký University Olomuc was held in an online mode. During these 3 days, a lot of experts shared their thoughts about **Geopolitics, Big Data, GIS applications to war situation, Energy Security in Europe, GIS applied to mapping European languages and dialects.**

With people from different countries and with different backgrounds, an interdisciplinary learning was conducted, bringing a lot of discussion to themes that European society is facing nowadays, such as the energy crises and Ukraine-Russia war.

In my point of view, the Spring School was very interesting because it brought a lot of historical and up-to-date content and information, making us to understand countries' relationship, cultural distribution (based on the dialects). Also, going beyond the physical conflicts, but taking in consideration cyber-conflicts, such as BigTechs domination over the internet – what they do with citizens data, which data they collect, etc.

CERTIFICATE OF PARTICIPATION

This is to certify that

Rodrigo Brust Santos

has registered at
Palacký University Olomouc, Czechia

where participated and successfully completed

International Spring School on Visualization 2023
